Applying for: the patent portfolio coordination slice of Legal Counsel (Commercial) at Vast Space (Long Beach, CA)

SUMMARY

Tradespace is a network of 235+ patent attorneys and an AI-assisted invention capture and prosecution platform, applying as the company itself rather than as an individual candidate. This is a generalist commercial counsel seat with patent portfolio coordination as one of several workstreams, so we are pitching only that slice: the invention intake, portfolio hygiene, and reporting work that a single commercial counsel juggling contracts, compliance, and process work would otherwise have to fit in around everything else.

RELEVANT EXPERIENCE

Invention Capture & Portfolio Buildout, Enveda Biosciences *Series B biotech · small legal team, high R&D velocity*

- Replaced a disclosure process engineers were quietly avoiding with AI-assisted intake that meets inventors where they already work: the direct equivalent of pulling patentable work out of engineers who don't recognize it as inventive.
- Migrated the full legacy portfolio in 30 minutes and became the IP team's system of record from day one, with no separate change-management project required.
- Gave a newly onboarded IP team member a working command center instead of a dependency on outside counsel for basic status checks, called “game-changing” from the first login.

Portfolio Strategy & Board Reporting, Woodward *industrial hardware manufacturer*

- Built patent-to-product mapping and board-ready KPI reporting for a hardware manufacturer transitioning off a legacy docketing system, the same “which three patents protect the core product” question every platform and prosecution effort ultimately has to answer.
- Selected over competing IPMS platforms specifically for configurability and fit with the client's existing product-lifecycle process, rather than for the AI drafting capability that later became the differentiator.

CORE CAPABILITIES MAPPED TO THIS ROLE

- Patent portfolio coordination and reporting: at Woodward we built patent-to-product mapping and board-ready KPI reporting for a hardware manufacturer transitioning off a legacy docketing system, the same which-patents-protect-the-core-product question this role's IP portfolio oversight duties ultimately have to answer, without requiring a dedicated IP headcount.
- Invention intake from engineering teams: at Enveda Biosciences we replaced a disclosure process engineers were quietly avoiding with AI-assisted intake that meets inventors where they already work, migrating the full legacy portfolio in 30 minutes, relevant for an aerospace hardware company where a single commercial counsel cannot chase every engineer for disclosures personally.
- Filing cost and turnaround: for one R&D client, pairing with a senior attorney matched by technology cut turnaround from six weeks to five days and cost by \$15,000 per utility filing, using AI-assisted prior art and market reporting and AI-drafting support for provisional filings to keep the patent side of this role moving without adding to its commercial contracts and compliance workload.

WHERE I STOP

We are not pitching the whole seat: the commercial contracting, business enablement, compliance and risk, and process development pieces of this role are outside what Tradespace does, and freedom-to-operate opinions and licensing negotiation judgment on the IP side stay with counsel regardless. Tradespace's role here would be narrowly on patent portfolio coordination and reporting.
