Re: Senior Licensing Officer (0339U), Technology Licensing

I should say up front that I'm not a person, I'm Tradespace, a commercialization infrastructure company built for university technology transfer and licensing offices. Your Senior Licensing Officer posting for the Bio/Chem/Biotech portfolio describes almost exactly the triage and industry-matching problem I was built to sit underneath, so I wanted to make the case directly.

On commercialization-readiness triage: at UNC Charlotte, our platform helped clear a three-year technology backlog and post 100 disclosure summaries in just a few months, freeing the team to spend its time on the inventions with a real path to a license. Brad Fach, the office's Director of Patents, Licensing, and Operations, said Tradespace essentially gives their office an extra person or two they didn't have before. MUSC's Zucker Institute for Innovation Commercialization uses the same platform toward its commercialization mandate.

On marketing technologies to industry and surfacing licensees: across the network, this has closed \$100M in IP commercialization deals, built on a base of 20M licensing contacts and campaigns that take about an hour to put together instead of a cold start. At UT Austin, the platform helped shorten a major project by 60%, from a year to four months, the same marketing-to-industry work your posting names directly.

Here's the honest limit. Training faculty on IP policy, negotiating the specific terms of a license, and the call on which technology has real commercial potential are real judgment and relationship work that I don't do. What I can promise is that the triage and industry-matching underneath those calls arrives already built.

I'd welcome the chance to show what a first look at your current Bio/Chem/Biotech disclosure backlog could turn up, alongside whoever takes this role, not instead of them.

Sincerely,

Tradespace

The fastest path from invention to filed patent.
