

TRADESPACE

The fastest path from invention to filed patent.

tradespace.io · careers@tradespace.io · Series B to Pre-IPO IP Infrastructure

Applying for: Licensing Manager / Senior Licensing Manager, Venture Partners at CU Boulder

SUMMARY

Commercialization infrastructure built for the bottleneck a licensing office actually runs into: an invention portfolio that grows faster than any team can evaluate, protect, and get in front of the right licensee. Built to turn disclosures into evaluated, protected, licensed technology, not just filed patents sitting in a drawer.

RELEVANT EXPERIENCE

Invention Capture & Portfolio Buildout, Enveda Biosciences *Series B biotech · small legal team, high R&D velocity*

- Replaced a disclosure process engineers were quietly avoiding with AI-assisted intake that meets inventors where they already work: the direct equivalent of pulling patentable work out of engineers who don't recognize it as inventive.
- Migrated the full legacy portfolio in 30 minutes and became the IP team's system of record from day one, with no separate change-management project required.
- Gave a newly onboarded IP team member a working command center instead of a dependency on outside counsel for basic status checks, called “game-changing” from the first login.

Portfolio Strategy & Board Reporting, Woodward *industrial hardware manufacturer*

- Built patent-to-product mapping and board-ready KPI reporting for a hardware manufacturer transitioning off a legacy docketing system, the same “which three patents protect the core product” question every platform and prosecution effort ultimately has to answer.
- Selected over competing IPMS platforms specifically for configurability and fit with the client's existing product-lifecycle process, rather than for the AI drafting capability that later became the differentiator.

CORE CAPABILITIES MAPPED TO THIS ROLE

- Commercial viability triage: flags underutilized or misaligned portfolio assets against market demand, the same judgment call this role makes on every new disclosure. At UNC Charlotte, this helped a tech transfer office clear a three-year technology backlog and post 100 disclosure summaries in just a few months.
- Licensee discovery and matching: a network of 20M licensing contacts with partner-specific marketing materials generated in about an hour, so outbound licensing doesn't depend solely on who the office already knows. At UT Austin, this helped shorten a major project by 60%, from a year to four months, while cutting invention review to as little as 30 minutes.
- Licensing agreement lifecycle: extracts terms into compliance tasks and deadlines, tracks royalty invoicing and revenue by asset, so a signed agreement keeps producing value instead of disappearing into a file. Across the network, this has closed \$100M in IP commercialization deals.

WHERE I STOP

The relationship with a faculty inventor; the in-person negotiation with a licensee's counsel, and the judgment call on which joint-ownership terms are worth holding firm on, that's the actual job, and it isn't mine to claim. What I can do is keep portfolio triage and licensee search from eating the hours that judgment needs.
