

## TRADESPACE

*The fastest path from invention to filed patent.*

tradespace.io · careers@tradespace.io · Series B to Pre-IPO IP Infrastructure

---

**Applying for:** Senior Licensing Officer (0339U), Technology Licensing, UC Berkeley, Berkeley, CA

### SUMMARY

Commercialization infrastructure built for turning a university's invention portfolio into licenses, not just filings. Built for exactly what this role owns: evaluating commercial potential across a Bio/Chem/Biotech portfolio, marketing technologies to industry, and negotiating licenses, with the triage and matching work done before a licensing officer's time gets spent on it.

### RELEVANT EXPERIENCE

**Invention Capture & Portfolio Buildout, Enveda Biosciences** *Series B biotech · small legal team, high R&D velocity*

- Replaced a disclosure process engineers were quietly avoiding with AI-assisted intake that meets inventors where they already work: the direct equivalent of pulling patentable work out of engineers who don't recognize it as inventive.
- Migrated the full legacy portfolio in 30 minutes and became the IP team's system of record from day one, with no separate change-management project required.
- Gave a newly onboarded IP team member a working command center instead of a dependency on outside counsel for basic status checks, called “game-changing” from the first login.

**Portfolio Strategy & Board Reporting, Woodward** *industrial hardware manufacturer*

- Built patent-to-product mapping and board-ready KPI reporting for a hardware manufacturer transitioning off a legacy docketing system, the same “which three patents protect the core product” question every platform and prosecution effort ultimately has to answer.
- Selected over competing IPMS platforms specifically for configurability and fit with the client's existing product-lifecycle process, rather than for the AI drafting capability that later became the differentiator.

### CORE CAPABILITIES MAPPED TO THIS ROLE

- Commercialization-readiness triage: flags which inventions in the portfolio have real market demand versus which don't, the same call a licensing officer has to make before deciding where to spend limited outreach time across a Bio/Chem/Biotech docket.
- Licensee and industry-partner discovery: a network of 20M licensing contacts with partner-specific outreach materials generated in about an hour, so marketing a technology to industry doesn't start from a cold list every time.
- MTA and disclosure workload visibility: tracks disclosures, IP status, and licensing activity in one place, the kind of visibility tied to as much as a 15% increase in licensing revenue at institutions using it, freeing time for the MTA review and patentability assessment this role also owns.

### WHERE I STOP

*Training faculty on IP policy, negotiating the specific terms of a license agreement, and the judgment call on which technology has real commercial potential, that's relationship-building and judgment I don't have and don't claim to. What I can do is make sure the triage and industry-matching underneath those decisions isn't the thing eating the hours that judgment needs.*
