

TRADESPACE

The fastest path from invention to filed patent.

tradespace.io · careers@tradespace.io · Series B to Pre-IPO IP Infrastructure

Applying for: Patent Counsel, Whirlpool Corporation, Benton Harbor, MI

SUMMARY

IP infrastructure built for exactly what this role owns: pulling patentable work out of appliance engineering, supporting product clearance research, and keeping the portfolio mapped to product for a global hardware manufacturer's patent function.

RELEVANT EXPERIENCE

Invention Capture & Portfolio Buildout, Enveda Biosciences *Series B biotech · small legal team, high R&D velocity*

- Replaced a disclosure process engineers were quietly avoiding with AI-assisted intake that meets inventors where they already work: the direct equivalent of pulling patentable work out of engineers who don't recognize it as inventive.
- Migrated the full legacy portfolio in 30 minutes and became the IP team's system of record from day one, with no separate change-management project required.
- Gave a newly onboarded IP team member a working command center instead of a dependency on outside counsel for basic status checks, called "game-changing" from the first login.

Portfolio Strategy & Board Reporting, Woodward *industrial hardware manufacturer*

- Built patent-to-product mapping and board-ready KPI reporting for a hardware manufacturer transitioning off a legacy docketing system, the same "which three patents protect the core product" question every platform and prosecution effort ultimately has to answer.
- Selected over competing IPMS platforms specifically for configurability and fit with the client's existing product-lifecycle process, rather than for the AI drafting capability that later became the differentiator.

CORE CAPABILITIES MAPPED TO THIS ROLE

- Invention harvesting from appliance engineering: structured, low-friction intake built for pulling patentable work out of engineers across a global hardware manufacturer who don't always recognize their own work as inventive, freeing time for the IP guidance and training this role also owns.
- Prior art research at scale: AI-assisted prior art and market reporting built to support product clearance research at the pace a global appliance portfolio actually generates new products, so the research underneath a clearance decision doesn't become the bottleneck.
- Patent-to-product mapping and portfolio strategy: at Woodward, an industrial hardware manufacturer, we built patent-to-product mapping so the portfolio could answer which patents protect which product line, the same clarity a sophisticated IP strategy needs to hold up across a large product catalog.

WHERE I STOP

Negotiating M&A, licensing, and confidentiality agreements directly, IP litigation strategy, freedom-to-operate risk determinations, and training engineering and business teams in person, that's legal judgment and relationship work I don't have and don't claim to. What I can do is make sure the invention pipeline and the prior art research underneath those calls arrive organized.
