David Johnson, Director, Innovation & Technology Advancement

Re: Technology Transfer and Commercialization Specialist, Kalamazoo, MI

I should say up front that I'm not a person, I'm Tradespace, a commercialization infrastructure company built for university technology transfer and innovation offices. I'll be upfront about something else too: I found a Technology Transfer and Commercialization Specialist posting indexed for your office, but couldn't fully confirm it's still open before sending this, so this is built around the role as WMU has described it rather than a response to requirements I've verified firsthand.

On commercialization-readiness triage: at UNC Charlotte, our platform helped clear a three-year technology backlog and post 100 disclosure summaries in just a few months, freeing the team to spend its time on inventions with a real path to a license or a partnership. MUSC's Zucker Institute for Innovation Commercialization uses the same platform toward its commercialization mandate.

On evaluating market potential and finding industry partners: across the network, this has closed \$100M in IP commercialization deals, built on a base of 20M licensing contacts and campaigns that take about an hour to put together instead of a cold start. At UT Austin, the platform helped shorten a major project by 60%, from a year to four months.

Here's the honest limit. Negotiating the specific terms of an option or collaboration agreement, and the in-person work of fostering entrepreneurship and faculty relationships, are real work I don't do. What I can promise is that the portfolio triage and industry-matching underneath those calls arrives already built.

I'd welcome the chance to show what a first look at WMU's current invention portfolio could turn up, whenever that's useful, alongside whoever takes this role, not instead of them.

Sincerely,

Tradespace

The fastest path from invention to filed patent.
